

CLAIM AMENDMENT

Please amend the claims in accordance with the following listing:

1. (Currently Amended) A system for navigating and browsing electronic media, comprising:

a device enabling viewing of digitally stored information, the device being configured to display at least portions of a categorization structure having a plurality of nested cascading category levels, each category level displaying of the plurality of nested cascading category levels comprising a plurality of category titles of electronic media content stored on a at least one storage device, each category title having a selectable link-token to the stored content for said title, and said each category title also being coupled to ~~the category title's~~ a hidden nested subcategory structure comprising link-tokens of category titles comprised in said each category title and the category titles in the different plurality of category levels able to be browsed independently of having to select and retrieve the stored content for any title from the storage device.

2. (Currently Amended) A system for tracking the navigation and browsing of electronic media, and facilitating the changing of navigation and browsing path at will with one single click to ~~reach~~ retrieve any desired new destination information. content within inter-linked content structure that comprises at least three category levels.

3. (Currently Amended) The system according to Claim 1, wherein ~~the plurality of link-~~ tokens of one or more category titles in a first category level of the plurality of nested cascading

category levels is displayed for viewing on a display device ~~by~~ in response to placing a cursor on a starting symbol representing a gateway to viewing the categorization structure displayed on the display device, without clicking.

4. (Original) The system according to Claim 3, wherein the plurality of category titles are displayed on the display device underneath the starting text-string or a symbol representing the gateway to viewing the categorization structure.

5. (Original) The system according to Claim 3, wherein placing the cursor on one of the category titles in the first category level causes said title to be highlighted and causes a second category level having a second plurality of titles to be displayed alongside the first category level, the plurality of titles in the second category level being sub-categories of the category title highlighted in the first category level.

6. (Original) The system according to Claim 3, wherein the titles in the first category level are displayed in a first listing-area with the titles listed one under the other.

7. (Original) The system according to Claim 5, wherein the titles in the second category level are displayed in a second listing-area with the titles listed one under the other.

8. (Original) The system according to Claim 5, wherein placing the cursor on one of the category titles displayed in the second category level causes said title to be highlighted and causes a third category level having a third plurality of category titles to be displayed alongside the second category level, the plurality of titles in the third category level being sub-categories of the highlighted title displayed in the second category level.

9. (Original) The system according to Claim 1, wherein the system has a selectable number of category levels.

10. (Original) The system according to Claim 1, wherein the system has a selectable number of category titles in each category level.

11. (Original) The system according to Claim 1, wherein the system is implemented using software.

12. (Original) The system according to Claim 1, wherein when the cursor is moved from a category level having a plurality of category titles which are sub-categories of a title in a higher category level, the category level with the plurality of sub-category titles, and all subsequent category levels cease to be displayed on the display device.

13. (Original) The system according to Claim 1, wherein when the cursor is moved from a first category title in a first category level to a second category title in the first category level, a first plurality of sub-category titles of the first category title in a second, lower category level ceases to be displayed on the display device, and a second plurality of sub-category titles of the second category title on which the cursor now rests is displayed in a second category level on the display device.

14. (Original) The system according to Claim 1, wherein a browser can browse the categorization structure independently of any media content displayed on the display device.

15. (Original) The system according to Claim 1, wherein a browser can navigate and browse the different category titles in the different category levels of the categorization structure without having to select and retrieve a page of media content from the storage device and without having to navigate back and forth between different pages of media content.

16. (Original) The system according to Claim 3, wherein the categorization structure resides with the pages of media content but is not displayed on the display device with the media content until a browser places the cursor on the starting symbol.

17. (Original) The system according to Claim 3, wherein the media content are the pages of a web site.

18. (Original) The system according to Claim 17, wherein a browser can navigate and browse the different category titles in the different category levels of the categorization structure without having to down load a web page from the storage device and without having to navigate back and forth between different web pages.

19. (Original) The system according to Claim 17, wherein the categorization structure resides with the web pages but is not displayed on the display device with the web pages until a browser places the cursor on the starting symbol.

20. (Original) The system according to Claim 1, wherein a browser can navigate back and forth between a category title in a first category level and a category title in a second category level of the categorization tree structure.

21. (Original) The system according to Claim 1, wherein a browser can move from a first or any category title in a particular level to any other title in the same level of the categorization tree structure.

22. (Currently Amended) A system for navigating and browsing electronic media, comprising:

a device for viewing of digitally stored information, the device being configured to display at least portions of a categorization tree structure having a plurality of cascading category lists, each list

displaying of the plurality of cascading category lists comprising a plurality of category titles to electronic media content stored on a at least one storage device, each category title having a selectable link-token to the stored content file for said each category title, wherein the device is configured to display one or more link-tokens comprised in the stored content file for said each category title in response to placement of a cursor on the selectable link-token of said each category title without clicking on or invocation of the selectable link-token of said each category title, whereby the system enables and the category titles in the different plurality of category lists able to be browsed independently of selecting and retrieving stored content files for any title from the at least one storage device.

23. (Currently Amended) A method for navigating and browsing electronic media, comprising the steps of:

placing a the cursor of the system of claim 22 on a first selectable link-token to the stored content file for a first category title of said plurality of category titles; and

viewing one or more link-tokens comprised in the stored content file for the first category title displayed in response to the step of placing.

~~on a starting symbol representing a gateway to a categorization structure of electronic media to display a first one of a plurality of category lists listing a first plurality of category titles of electronic media content stored on a storage device, each category title having a selectable link-token to a stored content file for said title, wherein placing the cursor on one of the category titles in the first~~

~~category box causes said title to be highlighted and causes a second category list having a second plurality of titles to be displayed alongside the first category list, the plurality of titles in the second category list being sub-categories of the category title highlighted in the first category list, the category titles in the different plurality of category lists being able to be browsed independently of selecting and retrieving stored content files for any title from the storage device.~~

24. (Currently Amended) A system for tracking the navigation and browsing of electronic media, the system enabling a browser to ~~reach~~ retrieve any one of a plurality of content pages linked to any one of the plurality of category titles in a categorization structure comprising at least three category levels with a single click of a computer mouse.

25. (Original) The system according to claim 24, wherein the system is embedded with a hidden dynamic nested-cascading categorization structure that allows the browser to browse and view the entire categorization structure independent of the content of any content page.

26. (Currently Amended) A tracking system for tracking the navigation and browsing of electronic media, comprising:

a device for viewing of digitally stored information, the device being configured to display a text tracking string comprised of a plurality of category titles displaying a particular sequence of a category browsing path of a page displayed on a display device, wherein ~~when a cursor is placed on any one of the category titles in the browsing path indicated by the tracking string,~~ a drop-down

menu appears displaying a plurality of category titles for that category in response to a cursor being placed on any one of the category titles in the browsing path indicated by the tracking string, and content of a category title of the plurality of category titles is retrieved in response to clicking on the category title.

27. (Canceled)
